---

## OBJECTIVES

- To leverage my skills and experience to make the world a better place to live in.
- To be on the floor of a mission-driven company and contribute to its success.
- To grow and learn as a programmer and project team member with a group of brilliant and enthusiastic individuals.

## PERSONAL SUMMARY

I am self-motivated and industrious with the desire to push the threshold of my capabilities and understanding. I work very well with teams. Being in a team is one of the best ways to learn and develop skills. I bring humor and personality to the team that makes collaboration fun and enjoyable. I also enjoy and flourish in a demanding work environment with short but accurate deadlines. Overall, I am a creative, critical and intuitive thinker who likes to collaborate with others on innovative projects.

## RELEVANT TECHNICAL SKILLS

- **Ruby On Rails:** 20 years of experience in developing scalable web applications. From v1.8 to v7.2.x
- **Javascript:** Substantial experience with NodeJS, React, React-Admin, Redux, Vue, Nuxt, and jQuery.
- **Python:** Data scraping and ETL for AI/ML system using Orator, bs4, Rev\_AI.
- **AI & Machine Learning:** LLM system design using OpenAI/Gemini, LangChain, and Qdrant; prompt engineering, RAG pipelines, embedding & re-ranking strategies, multi-agent and tool-calling architectures, prompt engineering, observability/evaluation (Helicone), and production concerns including safety, latency, and cost optimization.
- **Containerization:** Openshift, Docker, Kubernetes, automated deployment, and image generation.
- **API Development:** Developed standard RESTful and HATEOAS, JSONAPI with JSONSCHEMA, GraphQL and have integrated with numerous third-party services (Salesforce, Google, etc)
- **Databases:** MySQL, PostgreSQL, SQLite, MongoDB, Redis, Cassandra
- **Workflow Engines:** Camunda (BPMN), Ruote, Flor
- **Methodologies:** Agile, TDD, BDD, MVC+P, OO
- **Testing Frameworks:** Rspec, Test Unit, Jest, Cucumber, Mocha, Chai, Selenium, Cypress
- **Performance and Monitoring tools:** Google Analytics, New Relic, Airbrake
- **Project Management Technologies:** Basecamp, Lighthouse, PivotalTracker, JIRA

## PROJECT TEAM AND MANAGEMENT SKILLS

- Mentored team members and junior engineers.
- Understand and have applied Agile methodologies in a team like pair-programming, and scrum boards.
- Created numerous iteration proposals, actions plans, scope & sequence documents, project proposals, project specifications and contracts
- As Project Manager and Team Lead, I led many successful projects.
- Can articulate technical jargon and ideas in easily digestible ways for non-technical people and create documentation.
- Facilitated meetings, project assessments, overviews and interviews with teams and clients.

## RELEVANT EMPLOYMENT EXPERIENCE

### (12/2021 - Present) Senior Software Engineer (Team Lead) at ScopeAR

575 Market St #400, San Francisco, CA 94103

As Team Lead for the Web/API team at ScopeAR, I led the modernization of a large legacy Rails platform serving thousands of users, upgrading core infrastructure, fully migrating a REST API to GraphQL using graphql-ruby and Apollo, building an API-first CMS, rebuilding the admin client on a customized React-Admin stack, implementing tenant-aware RBAC and multi-tenancy with encrypted isolation, enterprise SSO using OAuth2, SAML with Azure AD, and RFC-9068 JWTs, developing robust inbound and outbound webhook infrastructure, and deploying RAG-based AI agents and helpdesk integrations, contributing directly to SOC 2 compliance and enterprise growth across aerospace, automotive, and defense customers

### (12/2018 - 12/2021) Senior Software Engineer (Tech Lead) - Technical Solutions Architect at Vineti

633 Howard St, San Francisco, CA 94105

A first-of-class software for "arm-to-arm" personalized therapy treatments utilized by major pharmaceutical makers and hospitals. Got to help cure cancer and save lives! Created micro-services and sub-modules in order to speed up the deployment and development of critical code-lines that would not impact the rest of the team. Revised core platform, applied Material-UI, GraphQL, JSONforms and integrated with the Camunda workflow engine to create a configurable customer application. Worked on the architecture and core platform teams to plan and develop our newest versions. Was made Tech Lead for the core platform team (4 members). Transitioned to a Technical Solutions Architect to aid in customer configurations, deployments and field new road-map features for the platform teams.

**(05/2007- Present) Principal Software Developer, Owner at Ruby Miner, LLC**

For several years, I've been doing various contract work through the company I founded, Ruby Miner LLC. I have developed technologies for social networking, content and multimedia management, "wiki" style collaboration, newsletter creation and distribution, integration into various popular APIs (Amazon EC2/FPS, Facebook Connect, Twitter, ConstantContact, Lighthouse to name a few), and e-commerce API (paypal, google checkout). While doing so, I utilized various project management tools such as Basecamp and PivotalTracker, and time-tracking software coupled with other invoicing software. At the same time, I hired other freelance contractors, and lead development and design teams, created project specifications, front-end wireframes, and UML diagrams. It is during this present period I've seen myself mature as a developer and project manager.

**(02/2017 - 12/2018) Senior Software Engineer at Grandrounds**

*360 3rd St, San Francisco, CA 94107*

An amazing company that has been helping people get second-opinions on medical issues by a specialist and used data analysis in order to help qualify treatments and physicians. Worked on numerous projects with the most impactful being the complete rewrite and refactoring of the core product libraries which allowed the release of two new products and made the product lines more scalable in the future. Introduced new coding patterns and principles to help maintain the monolithic rails application. Mentored junior team members.

**(08/2015 - 12/2016) Senior Software Engineer at LearnUp**

*995 Market Street, Suite 1408, San Francisco, CA 94103*

Solely redesigned and developed the second version of their core product: their job training program. The new job training program delivered interactive scenarios with multiple choices with point-values, progress bars that timed with audio, and slideshow components. I assigned to test several iterations of their job landing page and was able to get 30% increase in conversion. Another large effort was spent in revising several client targeted emails to increase engagement. At the end of my time at LearnUp, we started to create a new front end using React and Redux in order to have a faster, more responsive front end and start to move the platform to a micro-service architecture.

**(08/2011 – 4/2015) Software Developer at Change.org**

*383 Rhode Island, Suite 300, San Francisco, CA 94103*

Oversaw the growth of 1 million users to over a 100 million users in the 3 ½ years I worked there. Worked on building our custom translation layers, mobile interfaces, Facebook sharing, Salesforce Integration, Public API, Search Service, and lots of other radical projects that made Change.org the leading petition site in the world. Worked with numerous database types. Typically we'd use Redis to store process jobs and Resque to process them. A lot of work was done to break out of the typical request-response cycle with asynchronous loads, putting requests into batch jobs and various caching strategies. We ultimately moved to SaaS style architecture so that we could scale out more quickly and moved to using the HTML5 spec to have a responsive site that was mobile ready. We also became the lead contributors to the RendrJS node framework.

**(8/2010 – 8/2011) Software Developer at Yammer**

*1355 Market St. Floor 3, San Francisco, CA 94103*

Started their with a small engineering team and only 50 employees. I was the lead developer on their public API that would allow third-party developers to add plugins and widgets into Yammer. Worked on their front-end application framework, Yam.js (colloquially called 'Yam juice') by adding in promise chains and new types of post types. Worked on a in-depth calendar and event platform that would also broadcast event updates and alerts.

**(02/2010 – 7/2010) Senior Software Developer at Aurora Feint**

*330 Primrose Road, Suite 515, Burlingame, CA 94010*

I recently worked at Aurora Feint where I developed many client and server products including the OpenFeint Game Spotlight, the new RESTful read-only API, and the upcoming Cross-Platform RESTful API. The RESTful API was designed by me with 100% test coverage, and with JSON/XML/HTML support. Due to its RESTful nature and design all GET requests were completely page cacheable. Database query calls were optimized so that every server request only made 1-3 queries at most with SQL query caching. This would reduce the response time ( > 30 ms ), make the application completely Cross-Platform, easily maintainable and scalable. I also created a Javascript library to assist in the OpenFeint client webview technology. The library was able to send instructions to the Objective C Client, through Webkit, and produce a native client experience using HTML views.

**(09/06 – 5/07) Software Developer at Planet Argon, LLC**

*19 NW 5th avenue, Suite 203, Portland, OR 97209*

It was full-time Ruby on Rails development that also ventured into unobtrusive Javascript and AJAX programming. We primarily worked with PostgreSQL Database and utilized Agile Programming methodologies throughout our process. We used Basecamp, and Wikis for process documentation, Q&A and project management, and applied Test and Behavior Driven Development methodologies. One of the more interesting things I created was a custom AJAX Calendar with a variety of features such associated ranges, times, and calendar summarization. I also worked on creating a web-service layer that allowed users to interact with a web app via email and SMS.

**(10/05 –9/06) Software Developer / Project Manager at Ursa Minor Arts & Media**

*4318 Redwood Hwy, San Rafael, CA*

Ursa Minor is full-fledged media company that also has a web development branch. I was there full-time Rails developer, although I also developed in PHP and JavaScript when the project demanded it. I was responsible for numerous projects that I lead and developed. During

my stay, I developed our own in-house CMS that we were able to reuse for a number of different sites. I also helped develop and rolled out a new pricing and sign-up process for their hosting department.
